Overview

The Phase II and V Rules are part of the National Drinking Water Regulations of the federal Safe Drinking Water Act. These requirements have also been incorporated into Kansas Administrative Regulations (K.A.R.). Effective October 1, 2004 K.A.R. 28-15a - Primary Drinking Water Regulations adopted 40 CFR 141 by reference. In general, the requirements apply only to community water supplies (CWS) and non-transient, non-community (NTNC) water supplies. However, the nitrate and nitrite requirements additionally apply to transient non-community (NC) public water supplies.

Public water supplies (PWS) are monitored for regulated contaminants under a standardized monitoring schedule that consists of three compliance periods of three years each. The total of these nine years make up each compliance cycle. The first three-year compliance period of this rule was from January 1, 1993 to December 31, 1995. The second compliance period was from January 1, 1996 to December 31, 1998. The third compliance period was from January 1, 1999 to December 31, 2001. The end of the third compliance period ended the first compliance cycle. A second nine years compliance cycle consisting of three, three-year compliance periods began on January 1, 2002 and ended on December 31, 2010. A third compliance cycle began on January 1, 2011 and will end on December 31, 2019.

January 1, 2011, Kansas began the first compliance period (2011–2013) of the third compliance cycle (2011–2019). This document updates the state's formal waiver and monitoring plan effective for the third compliance cycle.

Phase II and V Rules Waiver Plans

Waivers By Vulnerability Assessment (Use and/or Susceptibility)

Statewide Susceptibility Waiver for Asbestos at POE - eliminate monitoring requirement

The Kansas Geological Survey has determined that there are no naturally occurring deposits of asbestos in Kansas. It is also known that asbestos fibers do not readily migrate through groundwater (GW). Therefore, all Kansas PWS are exempted from asbestos monitoring at their points of entry (POE) to the distribution system.

Individual Water Systems Use and Susceptibility Waivers for Asbestos in the Distribution – limit monitoring requirement to only those PWS with asbestos-cement pipe

Asbestos Distribution Use Waiver

The only systems that are susceptible to contamination from asbestos in Kansas are those that utilize asbestos-cement pipe in their distribution lines. CWS and NTNC water systems without asbestos-cement pipe in their distribution systems were automatically granted a use waiver from distribution system asbestos monitoring during the first compliance cycle (1993–2001). This same monitoring waiver was extended during the second compliance cycle (2002–2010), and will be extended during the third compliance cycle (2011–2019).

Asbestos Distribution Susceptibility Waiver

All CWS and NTNC water systems with asbestos-cement pipe were required to monitor at least once during the first compliance period (1993–1995) of the first compliance cycle (1993–2001). Samples were taken in areas of the water systems that are served by asbestos-cement pipe. Systems that had levels of asbestos below the MCL were provided susceptibility waivers for the remainder of the compliance periods (1996–1998 and 1999–2001) of the first compliance cycle.

All CWS and NTNC water systems with asbestos-cement pipe were required to monitor at least once during the first compliance period (2002–2004) of the second compliance cycle (2002–2010). Samples were taken in areas of the water systems that are served by asbestos-cement pipe. Systems that had levels of asbestos below the MCL were provided susceptibility waivers for the remainder of the compliance periods (2005–2007 and 2008–2010) of the second compliance cycle.

Kansas will continue a susceptibility waiver for monitoring during the third compliance cycle (2011–2019) for these same systems which are still utilizing asbestos-cement pipe in their distribution system. All CWS and NTNC systems with asbestos-cement pipe will be required to monitor for asbestos during the first compliance period (2011–2013) of the third compliance cycle (2011–2019). Those systems with results below the MCL will receive a susceptibility waiver for the remainder of the compliance periods (2014–2016 and 2017–2019) of the third compliance cycle.

Because there is very little analytical work expected for asbestos compliance monitoring, the Kansas Health and Environmental Laboratory (KHEL) will not be performing the Environmental Protection Agency (EPA) approved methods for asbestos analysis. Systems in Kansas that are required to perform asbestos distribution monitoring will need to contract with a Kansas certified private laboratory.

Statewide Susceptibility Waivers for Glyphosate and Cyanide – eliminate monitoring requirement

According to the EPA Drinking Water Treatability Database, granular activated carbon (GAC) adsorption is the best available technology for glyphosate. However, oxidation of glyphosate with chlorine is very effective. Oxidation of glyphosate with chlorine has shown to remove greater than 99% of the herbicide under typical drinking water treatment conditions.

Federal regulations require PWS to maintain a minimum disinfectant chlorine residual in treatment plant effluent. Kansas regulations require PWS to maintain a minimum disinfectant chlorine residual throughout the distribution system. Cyanide reacts rapidly with chlorine in water and decomposes, resulting in the removal of free chlorine. The MCL set for cyanide in the Federal regulations is for free cyanide.

Under K.A.R. 28-15-19, all Kansas PWS are required to maintain a distribution system chlorine residual of 0.2 mg/l free chlorine or 1.0 mg/l of combined chlorine.

All Kansas PWS were waived from glyphosate and cyanide monitoring during the first compliance cycle (1993–2001). This same monitoring waiver was extended during the second compliance cycle (2002–2010), and will be extended during the third compliance cycle (2011–2019).

Because there is no analytical work expected for glyphosate or cyanide compliance monitoring, KHEL will not be performing the EPA approved methods for analyzing these contaminants.

Statewide Susceptibility Waiver for Nitrite – eliminate monitoring requirement

Each PWS POE was monitored once for nitrite during the first compliance period (1993–1995) of the first compliance cycle (1993–2001). All nitrite levels were below 50% of the maximum contaminant level (MCL) at that time. Because chlorine converts nitrite to nitrate, and because K.A.R. 28-15-19 requires all Kansas PWS to maintain a distribution system chlorine residual of 0.2 mg/l free chlorine or 1.0 mg/l of combined chlorine, all Kansas PWS were waived from nitrite monitoring for the remainders of the compliance periods (1996–1998 and 1999–2001) of the first compliance cycle. This same monitoring waiver was extended during the second compliance cycle (2002–2010), and will be extended during the third compliance cycle (2011–2019).

Because there is no analytical work expected for nitrite compliance monitoring, KHEL will not be performing the EPA approved methods for analyzing this contaminant.

Statewide Use and Susceptibility Waiver for Dibromochloropropane – eliminate monitoring requirement

Dibromochloropropane (DBCP) is not registered for use in Kansas. All CWS and NTNC water supplies using KHEL for compliance monitoring have been monitored for DBCP by Method 524.2 at every entry point since the beginning of the first compliance period (1993–1995) of the first compliance cycle (1993–2001), and DBCP has never been detected. All water systems were waived from DBCP monitoring during the second compliance cycle (2002–2010), and this waiver will continue during the third compliance cycle (2011–2019).

In 2006, KHEL ceased reporting No Detect results for DBCP on the Method 524.2 results reports and began the practice of only reporting DBCP if there is a detect of the contaminant.

KHEL will continue to monitor for DBCP under Method 524.2, and if detected, the result for DBCP will appear on the results report. If the results report shows DBCP has been detected, the system will be required to conduct quarterly monitoring by contract with a Kansas certified private laboratory.

Because there is no analytical work expected for DBCP compliance monitoring, KHEL will not be performing the EPA approved methods for analyzing this contaminant.

If a system is ever required to conduct quarterly monitoring on a POE for DBCP through a Kansas certified private laboratory, quarterly monitoring is required to continue until four consecutive quarterly results are deemed by Kansas Department of Health and Environment (KDHE) to be reliably and consistently below (R&CB) the maximum contaminant level (MCL). R&CB is defined as having the aforementioned requisite number of consecutive samples below the MCL. POEs that are deemed R&CB the MCL may be reduced to annual monitoring with a Kansas certified private laboratory. If the POE shows three consecutive years of monitoring with no detect of DBCP, it will be reduced to triennial monitoring. If a POE is reduced to triennial monitoring, KDHE may allow the system to return to using KHEL and Method 524.2 to screen for DBCP.

Individual Water Systems Use and Susceptibility Waiver for Ethylene Dibromide (EDB) – limit monitoring requirement to PWS with a detectable result in screening with EPA Method 524.2

Ethylene Dibromide (EDB) pesticide products were cancelled by EPA in 1984. All CWS and NTNC water supplies using KHEL for compliance monitoring have been monitored for EDB by Method 524.2 at every entry point since the beginning of the first compliance period (1993–1995) of the first compliance cycle (1993–2001). Any water system with a POE showing detect of EDB by the EPA Method 524.2 screen performed by KHEL has been required to contract with a Kansas certified private laboratory to conduct quarterly EDB monitoring.

Any CWS and NTNC water supply not using KHEL for compliance monitoring was required to have their triennial EDB compliance sample analyzed by a Kansas certified private laboratory with an EPA method approved for EDB analysis.

Because there is very little analytical work expected for EDB compliance monitoring beyond the EPA Method 524.2 screen, KHEL will not be performing the EPA approved methods for analyzing this contaminant.

Once a system is required to conduct quarterly monitoring on a POE for EDB through a Kansas certified private laboratory, quarterly monitoring is required to continue until four consecutive quarterly results are deemed by KDHE to be R&CB the MCL. R&CB is defined as having the aforementioned requisite number of consecutive samples below the MCL. POEs that

are deemed R&CB the MCL may be reduced to annual monitoring with a Kansas certified private laboratory. If the POE shows three consecutive years of monitoring with no detect of EDB, it will be reduced to triennial monitoring. If a POE is reduced to triennial monitoring, KDHE may allow the system the option of using KHEL and EPA Method 524.2 to screen for EDB to satisfy its triennial EDB monitoring requirement.

Statewide Susceptibility Waivers for Specific Synthetic Organic Contaminants (SOC) – eliminate monitoring requirement

During the first compliance period (1993–1995) of the first compliance cycle (1993–2001), Kansas PWS were monitored for the required synthetic organic contaminants (SOC) according to the first Kansas Waiver and Monitoring Plan. Kansas experienced no confirmed detects of analytes that were analyzed with one of three different methods listed below:

- 1) No confirmed detects of these base-neutrals analyzed under EPA Method 525.2;
 - a) Benzo(a)pyrene
 - b) Di 2-ethylhexyl adipate
 - c) Di 2-ethylhexyl phthalate
 - d) Hexachlorocyclopentadiene
- 2) No confirmed detects of these carbamates analyzed under EPA Method 531.1;
 - a) Aldicarb
 - b) Aldicarb Sulfoxide
 - c) Aldicarb Sulfone
 - d) Carbofuran
 - e) Oxamyl
- 3) No confirmed detects of these herbicides analyzed under EPA Method 515.1
 - a) 2,4-D
 - b) 2,4,5-TP
 - c) Pentachlorophenol
 - d) Dalapon
 - e) Dinoseb
 - f) Picloram

Based on results of the initial monitoring, all Kansas PWS were granted susceptibility waivers for monitoring for these analytes for the remaining compliance periods (1996–1998 and 1999–2001) of the first compliance cycle, and for all compliance periods of the second compliance cycle (2002–2010).

KDHE will continue to approve susceptibility waivers for all PWS for these chemicals during the third compliance cycle (2011–2019) under the following conditions:

If KDHE is informed that any system with public water supplies are in proximity to the use of one or more of the specific chemicals or that do have a detect of one or more of the specific chemicals in a water quality sample will be required to monitor for those particular chemicals that are actually used or detected.

If then a specific chemical is detected at a water system's POE, the system will begin monitoring the POE quarterly, and quarterly monitoring will be required to continue until four consecutive

quarterly results are deemed by KDHE to be R&CB the MCL. R&CB is defined as having the aforementioned requisite number of consecutive samples below the MCL. POEs that are deemed R&CB the MCL may be reduced to annual monitoring. If the POE shows three consecutive years of monitoring with no detect, it will be reduced to triennial monitoring.

Because there is no analytical work expected for compliance monitoring of these SOC's, KHEL will not be performing the EPA approved methods for analyzing these contaminants. If a system is ever required to conduct compliance monitoring of these SOC's, the system will be required to contract with a Kansas certified private laboratory.

Individual Water Systems With GW POEs Susceptibility Waivers for Specific Pesticides – limit monitoring requirement to PWS with detect in screening with Triazine Immunoassay

Susceptibility waivers will be granted for 12 specific SOC's for PWS with GW POEs that meet the following conditions:

In order to receive a monitoring waiver for these chemicals during the third compliance cycle (2011–2019), a system must run a triazine immunoassay screen on water samples from each active GW POE at least once during each three year compliance period (2011–2013, 2014–2016, and 2017–2019). The immunoassay test kit must be verified for performance by the EPA Environmental Technology Verification Program, and must meet a minimum detection level of at least 0.0003 mg/L. The Kansas trigger level (TRL) for triggering follow-up monitoring for SOC by Method 507/508 is a result greater than or equal to 0.00045 mg/L*.

If the immunoassay result is less than 0.00045 mg/L, no further monitoring of the POE for SOC will be required for the remainder of the compliance period. Waivers will be evaluated during each three-year compliance period following the reporting of the immunoassay result. If any sample has a result greater than or equal to 0.00045 mg/L, then a follow-up sample must be collected and analyzed by an EPA approved method for all of the pesticide chemicals listed below. If a follow-up sample is required, then compliance and future monitoring requirements for any of the 12 SOC's listed below will be based upon the follow-up sample only.

*The trigger level of 0.00045 mg/L is an increase over the trigger level set in past Kansas Phase II/V Waiver and Monitoring Plans. Since immunoassay methods use antibody molecules that can bind to more than the target analyte, an immunoassay has a tendency to overestimate the concentration of the target analyte when other analytes are present that may bind with the antibody. The sensitivity of triazine immunoassay is highly dependent on the sample matrix. The trigger level of 0.00045 mg/L is entered into this Plan upon the recommendation of the KHEL Environmental Chemistry Laboratory Section Chief who had a BA in Chemistry and 38

years of experience including 10 years as Section Chief. The recommendation is made based upon observances of Kansas PWS triazine immunoassay results and results of triggered samples analyzed using Method 507/508 since 1996.

- 1) Alachlor
- 2) Atrazine
- 3) Chlordane
- 4) Endrin
- 5) Heptachlor
- 6) Heptachlor Epoxide
- 7) Lindane
- 8) Methoxychlor
- 9) Polychlorinated biphenyls (Aroclors)
- 10) Simazine
- 11) Toxaphene
- 12) Hexachlorobenzene

Statewide Use Waivers for Endothall, Diquat, and 2,3,7,8-TCDD – eliminate monitoring requirement

Use of products containing endothall and diquat are rare in Kansas.

Herbicides containing 2,3,7,8-TCDD are not used in Kansas. The number of grams of 2,3,7,8-TCDD released into the Kansas environment each year via manufacturing byproducts or manufacturing waste is tracked by EPA's Toxics Release Inventory.

Because there is no analytical work expected for endothall, diquat, or dioxin compliance monitoring, KHEL will not be performing the EPA approved methods for analyzing these contaminants.

Phase II and V Rules Monitoring Plans

General Monitoring

In accordance with K.A.R. 28-15-16(d), all new proposed PWS and all new sources of water added to existing PWS will conduct an initial monitoring sample of the raw water prior to being permitted for use as a public water supply to ensure that potable water meeting Kansas Primary Drinking Water Regulations can be produced.

All CWS and NTNC water systems that obtain water from their own GW or surface water / groundwater under the influence of surface water (SW/GU) sources will monitor each active POE for inorganic chemicals (IOC), volatile organic contaminants (VOC), and synthetic organic contaminants (SOC) based on their conformance with the appropriate waiver provisions.

When monitoring results are greater than the TRL for a contaminant (with the exception of nitrate where the TRL is met, not exceeded), additional monitoring for that contaminant is required to determine the extent of contamination.

Once a TRL is exceeded (met, in the case of nitrate), POEs must monitor quarterly for the contaminant for at least four consecutive quarters, and quarterly monitoring will be required to continue until four consecutive quarterly results are deemed by KDHE to be R&CB the MCL. R&CB is defined as having the aforementioned requisite number of consecutive samples below the MCL.

Samples may be analyzed at the KHEL or at any private laboratories that are certified by Kansas to do the required analysis.

All CWS, NTNC, and NC water systems that obtain water from their own GW, SW/GU sources will monitor each active POE for nitrate. When a POE of a CWS has a compliance sample nitrate result equal to or greater than 5 mg/L, and that POE has no history of quarterly nitrate monitoring that ended with 4 consecutive quarters of sample results at levels less than the MCL, then the water system is required to perform quarterly nitrate monitoring at the POE until 4 consecutive quarters of sample results show levels less than the MCL. When a POE of a CWS, does have history of 4 consecutive quarters of sample results at levels less than the MCL, then the TRL for increased nitrate monitoring is when sample results are greater than or equal to 10 mg/L.

Commented [R71]: The abbreviation, TRL, needs to be defined.

Commented [R72]: The trigger for nitrate with new systems is one-half the MCL. See start of 3rd paragraph in Nitrate section on page 9.

Commented [R73]: Only for systems that have demonstrated R&CB the MCL.

Kansas Base Monitoring Frequencies, Increased Monitoring Frequencies, and Reduced Monitoring

Asbestos Distribution

CWS and NTNC water systems that utilize asbestos-cement pipe in their distribution system will monitor for asbestos in areas of the distribution system serviced by asbestos-cement pipe.

The Kansas base monitoring frequency for asbestos distribution is one sample once every nine years with sample collection due in the first compliance period of the nine-year compliance cycle.

PWS that have levels of asbestos equal to or below the MCL will receive a susceptibility waiver for the remaining compliance periods (2014–2016 and 2017–2019) of the third

compliance cycle. Any system with asbestos results above the MCL will monitor quarterly until four consecutive quarters of results are under the MCL, and KDHE determines the results to be R&CB the MCL. R&CB is defined as having the aforementioned requisite number of consecutive samples below the MCL. After the system is determined to be R&CB the MCL, it can be reduced to annual monitoring. If the system shows results below the MCL for three consecutive years, it will receive a susceptibility waiver until the next first three year compliance period of the next nine year compliance cycle.

Nitrate

CWS, NTNC, and NC water systems that obtain water from their own GW or SW/GU sources will monitor each active POE for Nitrate.

The Kansas base monitoring frequency for Nitrate for all CWS, NTNC, and NC water systems is one sample per year.

When a POE of a CWS has a compliance sample nitrate result equal to or greater than 5 mg/L, and that POE has no history of quarterly nitrate monitoring that ended with 4 consecutive quarters of sample results at levels less than the MCL, then the water system is required to perform quarterly nitrate monitoring at the POE until 4 consecutive quarters of sample results show levels less than the MCL. When a POE of a CWS does have history of 4 consecutive quarters of sample results at levels less than the MCL, then the TRL for increased nitrate monitoring is when a result is greater than or equal to 10 mg/L.

The TRL for increased monitoring for nitrate will be a result greater than or equal to 10 mg/L. Water systems whose annual nitrate samples from active POEs meet or exceed the TRL will be requested to submit a confirmation sample. If the average of the original and confirmation samples is greater than or equal to 10 mg/L, quarterly monitoring will be required. If a confirmation sample is not submitted, then quarterly monitoring will be required.

Any POE required to monitor quarterly for nitrate will continue to do so until at least four consecutive quarters of results are under the MCL, and KDHE determines the results to be R&CB the MCL. R&CB is defined as having the aforementioned requisite number of consecutive samples below the MCL. After a POE is determined to be R&CB the MCL, its monitoring can be reduced to annual.

If a POE of a CWS has an annual nitrate compliance sample nitrate result equal to 10 mg/L, whether the POE has a history of conducting quarterly monitoring or not, the CWS has the option of performing one of two follow-up monitoring actions listed below:

- 1) Conduct quarterly monitoring without a confirmation sample; or
- 2) Submit a confirmation sample. If the average result of the original and confirmation samples is greater than or equal to 10 mg/L, the CWS is placed on a quarterly monitoring schedule.
 - a) If the CWS submits a confirmation sample and the average result of the original and confirmation samples is greater than 10 mg/L, then the CWS will have incurred an Acute Nitrate MCL Exceedance Violation.

Commented [R74]: The frequency for surface water is quarterly for one year, and then annually in the quarter with the highest reading. 23(d)5

Inorganic Chemicals (IOC)

CWS and NTNC water systems that obtain water from their own GW or SW/GU sources will monitor each active POE for the IOC listed in 40 CFR 141.62(b) as referenced in K.A.R. 28-15a-23. Compositing of IOC samples will not be allowed.

K.A.R. 28-15a-23 also requires CWS and NTNC systems to conduct monitoring of the following additional inorganic constituents, some of which are found on the list of National Secondary Drinking Water Standards (NSDWS): nickel; sodium; calcium; magnesium; potassium; phosphorus; chloride; sulfate; silica; iron; manganese; pH; conductivity; total dissolved solids; total hardness; alkalinity; and fluoride. Except for the public notice required when fluoride exceeds the secondary maximum contaminant level, Kansas has no plans to enforce compliance with the NSDWS secondary contaminant levels.

The Kansas base monitoring frequency for IOC for POEs treating SW/GU sources is one sample per year.

The base monitoring frequency for IOC for POEs treating GW sources is one sample every three years.

The TRL for increased monitoring for an individual IOC will be the MCL. Samples from active POEs with a base monitoring compliance sample that has an IOC result exceeding the TRL will be requested to submit a confirmation sample. If the average of the original and confirmation samples is greater than the TRL, quarterly monitoring will be required. If a confirmation sample is not submitted, then quarterly monitoring will be required.

A system with a POE with results above the MCL will be required to monitor that POE quarterly until at least four consecutive quarters of results are under the MCL, and KDHE determines the results to be R&CB the MCL. R&CB is defined as having the aforementioned requisite number of consecutive samples below the MCL.

After the POE is determined to be R&CB the MCL, its monitoring can be reduced to annual.

If a GW POE shows three consecutive years of monitoring below the MCL, its monitoring can be reduced to triennial.

Volatile Organic Contaminants (VOC)

CWS and NTNC water systems that obtain water from their own GW or SW/GU sources will monitor each active POE for the VOC listed in 40 CFR 141.61(a), as referenced in K.A.R. 28-15a-24. KHEL will perform an analysis screen of DBCP using Method 524.2 as described under the Phase II and V Waiver Plan earlier in this document.

The Kansas base monitoring frequency for VOC for all CWS and NTNC water systems is one sample every three years.

The TRL for increased monitoring for VOC (**except for Xylene, Toluene, o-Dichlorobenzene, and Ethylbenzene) will be 0.0005 mg/l, in accordance with K.A.R. 28-15a-24.

Because the MCLs for Xylene, Toluene, o-Dichlorobenzene, and Ethylbenzene are at least six times higher than the MCLs of the other regulated VOCs, meaningful TRLs for these four contaminants will be set at 1/1000 of their MCLs. Therefore, the TRL for Xylene is 0.010 mg/l (MCL = 10mg/L), the TRL for Toluene is 0.001 mg/l (MCL = 1 mg/L), the TRL for o-Dichlorobenzene is 0.0006 mg/l (MCL = 0.6 mg/L), and the TRL for Ethylbenzene is 0.0007 mg/l (MCL = 0.7 mg/L).

Samples from active POEs with a base monitoring compliance sample that has a VOC result exceeding the TRL of a VOC will be requested to submit a confirmation sample. If a confirmation sample is submitted, then if the average of the original and confirmation samples is

greater than the TRL, quarterly monitoring will be required for that particular VOC. If a confirmation sample is not submitted, then quarterly monitoring will be required.

Any system with a POE with results above the TRL will be required to monitor that POE quarterly for that particular VOC until at least four consecutive quarters of results are under the MCL, and KDHE determines the results to be R&CB the MCL. R&CB is defined as having the aforementioned requisite number of consecutive samples below the MCL.

After a POE is determined to be R&CB the MCL, its monitoring can be reduced to annual. If the POE shows three consecutive years of monitoring with no detect, its monitoring can be reduced to triennial.

**The TRLs of these contaminants are set higher than Federal regulations based on the recommendation of the KHEL Environmental Chemistry Laboratory Section Chief who had a BA in Chemistry and 38 years of experience including 10 years as Section Chief. The recommendation is made based upon observances of Kansas PWS VOC results and results of triggered samples analyzed using Method 524.2.

Ethylene Dibromide (EDB)

CWS and NTNC water systems that obtain water from their own GW or SW/GU sources will monitor each active POE for EDB. KHEL will perform an analysis screen of EDB using Method 524.2 as described under the Phase II and V Waiver Plan earlier in this document

The Kansas base monitoring frequency for EDB for all CWS and NTNC water systems is one screening sample every three years performed by KHEL or one sample every three years analyzed by a Kansas certified private laboratory.

The TRL for EDB is 0.00001 mg/l. If a sample from an active POE exceeds the EDB TRL, the water system will be requested by KDHE to contract with a Kansas certified private laboratory for quarterly monitoring.

Any system with a POE with results above the TRL will be required to monitor that POE quarterly for EDB until at least four consecutive quarters of results are under the MCL, and KDHE determines the results to be R&CB the MCL. R&CB is defined as having the aforementioned requisite number of consecutive samples below the MCL.

After a POE is determined to be R&CB the MCL, its EDB monitoring can be reduced to annual, and the system must contract for analysis with a Kansas certified private laboratory.

If the POE shows three consecutive years of monitoring with no detect of EDB, it will be reduced to triennial monitoring. If a POE is reduced to triennial monitoring, KDHE will allow the system the option of using a Kansas certified private laboratory or using KHEL and Method 524.2 to screen for EDB to satisfy its triennial EDB monitoring requirement.

Synthetic Organic Contaminants (SOC)

CWS and NTNC water systems that obtain water from their own GW or SW/GU sources will monitor each active POE for the SOC listed in 40 CFR 141.61(c), as referenced in K.A.R. 28-15a-24.

KHEL will perform an analysis screen of EDB using Method 524.2 as described under the Phase II and V Waiver Plan earlier in this document. The Kansas EDB monitoring plan is described under the Phase II and V Monitoring Plan for EDB earlier in this document.

The Kansas base monitoring frequency for SOC for POEs treating SW/GU sources of large PWS (population > 3,300) is one sample per year during May 1st – June 30th.

The Kansas base monitoring frequency for SOC for POEs treating SW/GU sources of small PWS (population $\leq 3,300$) is one sample every three years during May 1st – June 30th.

The Kansas base monitoring frequency for SOC for POEs treating GW is one triazine immunoassay sample every three years.

The TRL for SOC is the reporting levels which, with some exceptions, are 10% of the MCL.

EPA Method 508A will not be performed during the third compliance cycle (2011–2019) at KHEL. KDHE anticipates that minimal or no analytical work will be required for analysis of samples for pentachlorobiphenyls (PCBs) as decachlorobiphenyl. If required, testing will need to be contracted through a Kansas certified private laboratory. However, KHEL will perform EPA Method 508 for analysis of samples for PCBs as Aroclors.

PWS with samples from active POEs with a base monitoring compliance sample that has an SOC result exceeding the TRL will be requested to submit a confirmation sample. If the average of the original and confirmation samples is greater than the TRL, quarterly monitoring for that particular SOC will be required. If a confirmation sample is not submitted, then quarterly monitoring will be required.

A water system with a POE with results above the TRL will be required to monitor that POE quarterly for that particular SOC until at least four consecutive quarters of results are under the MCL, and KDHE determines the results to be R&CB the MCL. R&CB is defined as having the aforementioned requisite number of consecutive samples below the MCL.

After a SW/GU POE is determined to be R&CB the MCL, its monitoring can be reduced to annual. If the assigned annual quarter for the reduced monitoring is in the Second Quarter, then the sample collection will be required during May 1st – June 30th. If the assigned annual quarter for the reduced monitoring is not the Second Quarter, then one sample will be required during May 1st – June 30th and one sample will be required in the assigned annual quarter.

If a SW/GU POE of a small water system (population $\leq 3,300$) shows three consecutive years of monitoring with no detect, its monitoring can be reduced to triennial, with sample collection taking place during May 1st – June 30th at least once during the next three-year compliance period.

After a GW POE is determined to be R&CB the MCL, its monitoring can be reduced to annual. If a GW POE shows three consecutive years of monitoring with no detect, its monitoring can be reduced to triennial, and it can return to using the triazine immunoassay screen to satisfy the triennial SOC monitoring requirement.

Monitoring and Compliance Data Management

Monitoring/reporting, schedules, and compliance tracking will be managed in the Safe Drinking Water Information System (SDWIS). All sample results from KHEL will be downloaded to SDWIS. Sample results from private commercial laboratories that are submitted by water systems for compliance monitoring will be hand entered into SDWIS. Compliance with MCL and monitoring requirements will be checked by utilizing automated compliance determination and monitoring/reporting reports in SDWIS. Electronic images of copies of private laboratory results reports submitted by water systems for compliance monitoring will be maintained on KDHE's Image Now electronic filing system.

Commented [R75]: The practice of determining the exceedance of MCLs is needed.

APPENDIX A

Acronym Glossary

CWS	=	Community Water System
DBCP	=	Dibromochloropropane
EDB	=	Ethylene Dibromide
GW	=	Groundwater
IOC	=	Inorganic Chemicals
K.A.R.	=	Kansas Administrative Regulations
KDHE	=	Kansas Department of Health and Environment
KHEL	=	Kansas Health and Environmental Laboratory
MCL	=	Maximum Contaminant Level
NC	=	Transient, Non-community
NSDWS	=	National Secondary Drinking Water Standards
NTNC	=	Non-transient, Non-community
POE	=	Point of Entry to a water system's distribution system
PWS	=	Public Water Supply Systems
R&CB	=	Reliably and Consistently Below
SDWIS	=	Safe Drinking Water Information System
SOC	=	Synthetic Organic Contaminants
SW/GU	=	Surface Water or Groundwater Under the Influence of Surface Water
TRL	=	Trigger Level
VOC	=	Volatile Organic Contaminants

APPENDIX B

Maximum Contaminant Levels (MCL) and Trigger Levels (TRL) For Inorganic Chemicals

Regulated IOC	MCL (mg/L, unless otherwise noted) (TRL Are Same As MCLs)
Antimony	0.006
Arsenic	0.010
Asbestos (fibers > 10 micrometers)	7 million fibers/Liter
Barium	2
Beryllium	0.004
Cadmium	0.005
Chromium	0.1
Fluoride	4.0 ***
Mercury	0.002
Selenium	0.05
Thallium	0.002

***Fluoride has a secondary maximum contaminant level of 2.0 mg/L that requires public notification.

APPENDIX C

Maximum Contaminant Levels (MCL) and Trigger Levels (TRL) For Nitrate

Type of Public Water System	Nitrate MCL	Nitrate TRL
*CWS	10 mg/L	10 mg/L
NTNC	20 mg/L	10 mg/L
NC	20 mg/L	10 mg/L

Commented [R76]: The initial trigger is ½ the MCL. A trigger of 10 is only allowed for systems that have demonstrated R&CB the MCL.

* When a POE of a CWS has a compliance sample nitrate result equal to or greater than 5 mg/L, and that POE has no history of quarterly nitrate monitoring that ended with 4 consecutive quarters of sample results at levels less than the MCL, then the water system is required to perform quarterly nitrate monitoring at the POE until 4 consecutive quarters of sample results show levels less than the MCL. When a POE of a CWS, does have history of 4 consecutive quarters of sample results at levels less than the MCL, then the TRL for increased nitrate monitoring is 10 mg/L.

APPENDIX D

Maximum Contaminant Levels (MCL) and Trigger Levels (TRL) For Volatile Organic Contaminants

Regulated VOC	MCL (mg/L)	TRL (mg/L)
1,1,1-Trichloroethane	0.2	0.0005
1,1,2-Trichloroethane	0.005	0.0005
1,1-Dichloroethylene	0.007	0.0005
1,2,4-Trichlorobenzene	0.07	0.0005
1,2-Dichlorobenzene (O-Dichlorobenzene)	0.6	0.0006 (1/1000 of MCL)
1,2-Dichloroethane	0.005	0.0005
1,2-Dichloropropane	0.005	0.0005
1,4-Dichlorobenzene (P-Dichlorobenzene)	0.075	0.0005
Benzene	0.005	0.0005
Chlorobenzene (Monochlorobenzene)	0.1	0.0005
Cis 1,2-Dichloroethylene	0.07	0.0005
Dichloromethane (Methylene Chloride)	0.005	0.0005
Ethylbenzene	0.7	0.0007 (1/1000 of MCL)
Styrene	0.1	0.0005
Tetrachloroethylene	0.005	0.0005
Tetrachloromethane (Carbon Tetrachloride)	0.005	0.0005
Toluene	1	0.001 (1/1000 of MCL)
Trans 1,2-Dichloroethylene	0.1	0.0005
Trichloroethylene	0.005	0.0005
Vinyl Chloride	0.002	0.0005
Xylene	10	0.010 (1/1000 of MCL)

APPENDIX E

Maximum Contaminant Levels (MCL) and Trigger Levels (TRL) For Synthetic Organic Contaminants

Regulated SOC	MCL (mg/L)	TRL (mg/L) (Same as minimum KHEL reporting level)
Alachlor (Lasso)	0.002	0.0002
Atrazine	0.003	0.0003
BHC-Gamma (Lindane)	0.0002	0.00002
Chlordane	0.002	0.0002
Endrin	0.002	0.0002
Ethylene Dibromide (EDB) (EDB is an SOC screened for with VOC EPA Method 524.2)	0.00005	0.00001
Heptachlor	0.0004	0.00004
Heptachlor Epoxide	0.0002	0.00002
Hexachlorobenzene	0.001	0.0001
Methoxychlor	0.04	0.004
Polychlorinated Biphenyls (PCB) as Aroclors	0.0005	0.0003
Simazine	0.004	0.0004
Toxaphene	0.003	0.002
